R&D PT Indo Acidatama, Tbk and PT Insani Investama's Demo

Success with POMI. Greeting with Central Java's farmers.

Forward From Editor

In this edition, we purposely show some pictures and articles from the whole branches and strategic partner of PT Indo Acidatama, Tbk which spreading at all Jawa, Bali and Sumatra. There are many things will be expressed, but because of place constraint, so we only able to present sample of some farmers who has been using *Pomi* and *BeKa* produced by PT Indo Acidatama, Tbk.

Their success is our pride, PT Indo Acidatama, Tbk and we do hope that the readers, particularly the farmers can be inspired to follow positive experience described in this edition.

Fertile my country, sold out my *Pomi*,
Go ahead, *goPomi*.

Regards,
Go organic, *goPomi*.

Yes..... yes.... Yes.....!!!

1 Edition : 0002/October/2009

Palm tress great harvest at Lampung. Successfull after using, *Pomi* the harvest was multiplied with less fertilizer cost.

Pouring brown *Pomi* by Deputy Bupati, Central Lampung, Mr. Musa Ahmad, S.Sos at Makmur farmer group, Indra Putra Subing, Terbanggi Besar, Central Lampung.

Rubber with brown *Pomi* , Mr. Supangat, Tanjung Iman, Nord Lampung

The usage of **RANDEX** is already proofed the result indeed, there are more quantity. And the cost analysis is more efficient.

Some great plant companies which have tried **RANDEX** v.i.z : PTP Nusantara XIV Makasar reached 22% efficiency, PT Union Sampoerna Triputra Persada (USTP) reached 34 % efficiency in cost

The Farmers in Lampung are very proud of Pomi.

The inviting guests consist of Agriculture shop owners and competition participated farmers regions all Malang. The speech was forwarded by Mr. Henry Yanuar.

From Yellow *Pomi* testing in Subang agricultural service, West Java in 2009, This yellow *Pomi* has successfully increased 26% harvest, it effects to Rp. 5.000.000,- income/Ha. Off course this will help farmers' welfare and the unhulled rice crop is becoming higher in quality.

Abdul Hamid is one of chilly farmers in Kedungbokor. He feels very satisfied and proud after using *Pomi* Bio organic fertilizer. His chilly growth is great after spraying with *Pomi*. Its leaves are bigger and wider and there are more flowers. The main point "I will always use in any *Pomi* chilly plant", commented Mr. Abdul Hamid to the officer.

Not only Mr. Abdul Hamid who feels the benefit of using *Pomi*, Mr. Maud, the father of Mr. Hamid also feels the same thing, also "SULUH TANI" shop owner : Mrs. Erna and some farmers in Kedungbokor give the same comments.

After 3X spraying his union trees, Mr. Wahyudin, a farmer from Rengaspendawa commented : my chilly leaves become stretch the color becomes absolutely green. Seeing this condition, my red union will be stronger against infestation, so I am not worry though the weather is not good and rain fall is relatively high. But by routinely using *Pomi*, the union plant will strong against infestation and to any diseases. This experience have much been experienced by union farmers in Brebes and its surrounding.

The benefit of *Pomi* are not only felt by red union, Mr. Mushlih, a farmer from Rengaspendawa village, Larangan, he plants peas also feels the *Pomi* benefit. His peas are sprayed by *Pomi*, besides it has great growth, its harvest is also increased.. In the beginning he felt worry, because usually if peas has great growth, the crop will be decreased. But after seeing the *Pomi* benefit, he had a new experience v.i.z : the plant has great growth, and there are significantly increased crop result.

Seeing the fact of the crop, Mr. Mushlih thinks that he needs to share his experience to other farmers at his village. Consequently, he always participates to promote *Pomi* without thinking about its fee.

Mr. Otong from Panagan, Cidatar, Cisarupan, Garut, West Java has been using *Pomi* for tomatoes from 20 days after planting, 4 X application.

According to Mr. Otong, before using *Pomi* every fruit stem usually has only 7-8 tomatoes from 12 flowers. Yet after using *Pomi*, there is a significant fruit increasing grow upto 12-13 fruits in every fruit stem. Mr. Otong is very happy, he said that *Pomi* has really proofed its high quality.

Harvest white rugosa/brassica of Mr. Alit Amay
Pilot project harvest 10 plants = 11.50 Kg
Conventional harvest 10 plants = 7 Kg
Location : Cihelet

I like staying at the garden, seeing my vegetables growth and they are strong against infestation

Super cabbage harvest (upto 5 Kg/pce)
Using green Pomi at Mr. I Made Cana's garden at Pemuteran, Pempatan, Rendang, Karangasem, Bali.

The Board Of Directors, staffs and employees of Pt Indo Acidatama, Tbk.
And all the Board of Editors

Happy Idul Fitri 1430 H

Please forgive us deeply & spiritually

BeKaCorner

(...it's not Bra Corner ...)

This is the column we provide to be filled in with miscellaneous things or events happened in the field during selling process or socialization of *Pomi* dan *BeKa* usage.

This column is a free one, fresh and full of humour which is provided for all readers and all contributors as well in order can loudly and organically laugh. (seeing laughing is still free of charge)

We are waiting for your funny jokes articles addressed to our editor rommel.macmoore@gmail.com

What is the similarity between *Pomi* and Manohara ?

Both make us convenient and as a correct choice indeed.

Pomi make us convenient at the garden. Manohara make us convenient also to plant.

Pomi is a correct and suitable choice, With multiplied result. Manohara is a correct choice, But please don't fold !!!!
